CHIEF COMPLAINT

"Heart racing" on exertion, two weeks.

HPI

48-year-old male reports two-week history of palpitations on moderate exertion (climbing more than two flights of stairs) lasting 2-5 min. Denies syncope, chest pain, dyspnea at rest. New job started 6 weeks ago – significantly increased physical activity. Smokes occasional cigarettes (3-4/week). FH: father MI age 58.

EXAM / VITALS

BP 142/88 HR 92 BMI 31.2  
CV: regular at rest, no murmurs.  
Pulm: CTAB.

DIAGNOSTICS PERFORMED TODAY

- CPT 93000 – 12-lead ECG: sinus rhythm 92, no ischemic changes,  
QTc 421 ms. Interpreted by Joshi, MD.

ASSESSMENT/PLAN

1. Palpitations with exertion (R00.2). Concerning history given FH.
  - Ordered exercise stress test (separate referral).
  - 14-day cardiac event monitor.
2. Stage 2 hypertension (I10) – new diagnosis. Started lisinopril 10 mg.
3. Tobacco use – counseled cessation.

E/M LEVEL: 99204 – new patient, moderate-complexity MDM (new problem with workup ordered, two new prescriptions).

Signed: Joshi, A. MD – 09/01/2024 11:33
